Spices

Turmeric futures on the national bourse has made a new fresh 4 year low at 5198 and this bearish trend is likely to persist as it is likely to test 5150-5100 levels. No Mysore turmeric was brought for sale by the turmeric growers and only local turmeric came for sale. The buyer traders are purchasing only for their local demand, as they are still waiting for fresh upcountry demand. Regarding the price of the turmeric, the finger and root variety decreased by Rs.100 a quintal each due to quality. At the Erode Turmeric Merchants Association salesyard, finger turmeric was sold at Rs.5,229-6,449 a quintal and root variety at Rs.4,919-6,089. At the Regulated Marketing Committee, finger turmeric was sold at Rs.5,069-6,206 and root variety at Rs.4,625-5,969. Cardamom futures (June) may witness recovery till 1800-1830 levels. It is reported that the Spices Board, is looking at the option of online auction of cardamom to help mitigate the impact of Covid-19 crisis. The option of sale of cardamom through e-NAM platform under Union Ministry of Agriculture, is also being explored and the Board has is in the process of consulting with stakeholders. The Spices Board is also continuing with the operation of its laboratories in the country to facilitate exports. Starting from May 5, the cardamom to be exported to Saudi Arabia will be tested at Spices Board's quality evaluation labs. Jeera futures (June) may consolidate in the range of 13450-13690 as the fundamentals are bearish. Spot prices are down amid lower off-take, reduced processing. The off-take is limited with major wholesale consuming sectors such as restaurants and hotels remaining closed. They consume about 7-8 per cent of the overall cumin sales. In addition to that, export orders are not moving due to short-staffed processors. The short covering in Dhaniya futures (June) is likely to face resistance near 5700-5725 levels. The masala companies are buying only on a limited scale and often by approaching farmers directly. Demand for coriander is steady.

Oilseeds

Soybean futures (June) is expected to trade with a downside bias facing resistance near 3735 levels. India's soy meal exports may fall due to subdued demand from traditional overseas buyers amid ongoing lockdowns. Shutdowns in several parts of the world have hit supply chains, with transport restrictions preventing soy meal from getting delivered to poultry farms and even demand for the livestock also fell on the scare of coronavirus. Secondly, the monthly USDA report cited that the 2020/21 outlook for U.S. soybeans is for higher supplies, crush, exports, and lower ending stocks compared to 2019/20. The soybean crop is projected at 4.125 billion bushels, up 568 million from last year on increased harvested area and trend yields. Despite lower beginning stocks, soybean supplies are projected up 5 percent from 2019/20 to 4.720 billion bushels. Mustard futures (June) is looking bullish for 4250-4270 levels, hence a dip towards 4170-4200 levels can be considered as buying opportunity. In this peak crushing season, the availability of mustard seeds with the mills has eased a lot as arthiyas are supplying mustard seeds. Labour problem has also more or less eased. Trucks loaded with edible oils are now reaching interior areas to reach out to the dealers and distributors. Soy oil futures (June) may test the resistance near 772, while CPO futures (May) is expected to trade higher towards 610-615 levels. Malaysian palm oil futures jumped nearly 2% on Wednesday on forecasts for lower production in May. Indonesia, the world's top producer, is considering alternate plans to increase subsidies for the country's ambitious biodiesel programme after crude oil prices tumbled, a finance ministry official said on Wednesday. The government is discussing options to continue financially supporting the programme which may include giving direct subsidy, diverting other fuel subsidy to the biodiesel programme or increase the levy collected from palm oil exporters.

Other Commodities

Cotton futures (May) may trade higher towards 16000-16100 levels. The reasons being firstly, the Indian cotton is now cheaper than anywhere else in the world, trading at a 12-15 percent discount to prices globally. Hence, we may attract export orders from the countries that are slowly opening the lockdown. Secondly, the market participants have again turned optimistic about demand from China especially after the U.S. government export sales report that included higher sales to China. Secondly, USDA highlighted that US cotton exports are expected to rebound as the world economy begins to recover. Chana futures (June) may trade sideways in the range of 4110-4170 levels. Amidst rising temperature and weak physical demand, sluggish trend in chana continued with its prices being quoted at Rs. 4,100-Rs.4,125 a quintal. Chana dal also quoted lower on weak demand. Demand is also suffering due to closure of restaurants, small eatery joints, big retail chains etc. which is adversely affected overall demand. Castor seed futures is trading nearly just to its yearly low of 3608 and going ahead this bearish trend in June contract will possibly get extended to 3600-3550 levels. Manufacturing and trade curbs all over the world in the wake of the coronavirus pandemic hurt India's castor oil exports in the last leg of 2019-20 (Apr-Mar). Overseas shipments of the industry oil are seen at around 500,000 tn in 2019-20 (Apr-Mar), down from 570,000 tn in the previous last year. Manufacturing and sales are hit hugely during the lockdown. Lower-than-expected demand from China, Japan, the US, and Europe will likely keep the export figures depressed in the coming months. Domestic demand for castor oil has declined by 40-45% due to the lockdown as crushing of the oilseed and overall trade has been affected.
